

LLORA — Librarian & Staff Manual

LLORA (Lorma Library Online Research Assistant) is the library's AI chat assistant. As a librarian, you can monitor patron conversations, manage the chat system settings, and respond to patrons directly through the live chat feature.

Table of Contents

1. Accessing the Admin Dashboard
 2. Dashboard Overview
 3. Monitoring Patron Sessions
 4. Live Chat — Responding to Patrons
 5. Managing FAQs and Library Info
 6. Setting Library Hours
 7. Managing Staff Contacts
 8. Configuring the AI Assistant
 9. Analytics and Reports
 10. Reviewing Patron Feedback
 11. Exporting and Cleaning Up Data
 12. Frequently Asked Questions
-

1. Accessing the Admin Dashboard

Open your browser and go to:

```
https://your-chatbot-url/admin/
```

You will be prompted to log in with your username and password. Contact your system administrator if you do not have credentials.

Note: The admin dashboard is only accessible to authorized staff. Do not share your login credentials.

2. Dashboard Overview

After logging in, you will see the main dashboard with the following sections in the sidebar:

Section	What it does
Sessions	View all patron chat conversations
Analytics	Usage statistics and charts
Quality	Patron feedback and unanswered questions
Live Chat	Active librarian handoff queue and history
Staff Ratings	Patron satisfaction scores per librarian
AI Settings	Configure the bot's name and personality
Library Info	Manage FAQ buttons shown in the widget
Library Hours	Set opening hours per day
Staff Contacts	Add librarian emails for notifications
Settings	Notification preferences

3. Monitoring Patron Sessions

Viewing sessions

Go to **Sessions** in the sidebar. You will see a list of all patron conversations with:

- A friendly display name (e.g. "Blue Owl 42") — patrons are anonymous
- Date and time of the conversation
- Number of messages exchanged
- Status: **Active** (patron is currently chatting) or **Expired** (session ended)

Click any session to open the full conversation transcript.

Searching sessions

Use the search bar at the top of the Sessions page to find conversations containing a specific word or phrase — useful for finding sessions about a particular topic or book.

Flagging a session

If a session needs follow-up, click the **Flag** button inside the session detail view and add a note. Flagged sessions appear in the **Flagged Sessions** tab so you can find them easily later.

Filtering by status

Use the **Active / Expired** filter buttons to narrow down the list.

4. Live Chat — Responding to Patrons

When a patron clicks the **Librarian** button in the chat widget, you will receive an email notification. Here is the full process:

Step 1 — Receive the notification

You will get an email with the subject " **A patron wants to ask a librarian**" containing a link to the live chat queue.

Step 2 — Open the live chat queue

Click the link in the email, or go directly to:

```
https://your-chatbot-url/chat/
```

Enter your name when prompted. This name will be shown to the patron when you join.

Step 3 — Claim a session

The queue shows all patrons currently waiting. Each card shows:

- The patron's display name
- How long they have been waiting
- Their patron type (Student, Faculty, Alumni, or Visitor)

Click **Claim** on the session you want to handle. Once you claim it, other librarians are automatically notified by email so they know not to join that session.

Step 4 — Chat with the patron

Type your reply in the message box at the bottom and press **Send** or hit **Enter**.

- You can see the patron's full conversation history with the AI bot above your chat
- The patron sees your messages in real time

- A typing indicator shows when the patron is typing

Step 5 — End the chat

When you are done, click **End Chat**. The patron will see a message saying the chat has ended and will be returned to the AI assistant. They will also be asked to rate their experience.

If a session is already claimed

If you click a session that another librarian has already claimed, you will see a message saying who claimed it. You will also receive an email notification automatically.

Releasing a session

If you claimed a session by mistake, click **Release** to put it back in the queue for another librarian to pick up.

5. Managing FAQs and Library Info

Go to **Library Info** in the sidebar to manage the quick-reply FAQ buttons shown in the chat widget.

Adding a new FAQ

1. Click **Add FAQ**
2. Fill in the fields:
3. **Label** — the button text shown in the widget (e.g.  Library hours)
4. **Question** — the full question text sent when the patron clicks the button
5. **Answer** — the bot's reply
6. Optionally attach an **image** (max 200 KB) or a **PDF** (max 5 MB) to be shown with the reply
7. Click **Save**

Editing an existing FAQ

Click the **Edit** (pencil) icon next to any FAQ item, make your changes, and click **Save**.

Reordering FAQs

Drag and drop FAQ items to change the order they appear in the widget.

Deleting a FAQ

Click the **Delete** (trash) icon next to the FAQ item. This cannot be undone.

Tips for writing good FAQs

- Keep the **Label** short — it appears as a button in the widget
 - Write the **Question** as a patron would naturally ask it (e.g. "What are the library hours?")
 - The **Answer** should be complete and self-contained — the patron may not ask a follow-up
 - Use plain language — avoid jargon
 - For hours and policies with multiple details, consider attaching an image of the official schedule
-

6. Setting Library Hours

Go to **Library Hours** in the sidebar.

Set the opening and closing times for each day of the week. Use 24-hour format (e.g. for 7:00 AM, for 7:00 PM).

To mark a day as closed, leave the time windows empty.

Why this matters

The **Librarian** button in the chat widget is automatically:

- **Enabled** during library hours
- **Disabled** 30 minutes before closing time
- **Disabled** on closed days, with a message showing the next available time

Always keep library hours up to date so patrons know when they can reach a librarian.

7. Managing Staff Contacts

Go to **Staff Contacts** in the sidebar to manage who receives email notifications when a patron requests a librarian.

Adding a staff contact

1. Click **Add Contact**
2. Enter the librarian's **Name** and **Email address**
3. Click **Save**

The contact is active by default. All active contacts receive an email whenever a patron clicks the Librarian button.

Deactivating a contact

Toggle the **Active** switch off to stop sending notifications to that person without deleting their record. Useful for staff who are on leave.

Removing a contact

Click **Delete** to permanently remove a contact.

Tip: Add all librarians who are available to handle live chat. The first one to click the link in their email gets the session.

8. Configuring the AI Assistant

Go to **AI Settings** in the sidebar to customize how LLORA behaves.

Field	Description
Assistant Name	The name shown in the widget header (default: <code>LLORA</code>)
Personality	How the bot speaks — tone, style, emoji usage
Limitations	Topics the bot is restricted to (keep this focused on library topics)
Welcome Message	The first message shown when a patron opens the chat. Use <code>{name}</code> to insert the bot name

Click **Save** to apply changes immediately — no restart needed.

Important: Do not remove the topic limitations unless you want the bot to answer general knowledge questions. Keeping it focused on library topics gives patrons more accurate and relevant responses.

9. Analytics and Reports

Go to **Analytics** in the sidebar to view usage statistics.

Available charts and metrics

Metric	Description
Intent Breakdown	What types of questions patrons are asking (catalog search, library info, greetings, etc.)
Hourly Activity	Which hours of the day are busiest
Daily Activity	Which days of the week are busiest
Avg. Messages per Session	How long conversations typically are
Failed Queries	Questions the bot could not answer well
Total User Messages	Total patron messages in the selected period

Use the **Days** selector (7, 30, 90, 365) to change the time range.

Using analytics to improve the FAQ

Check the **Failed Queries** count and the **Quality** → **Unanswered Queries** section regularly. If patrons are repeatedly asking questions the bot cannot answer, add those questions to the FAQ in **Library Info**.

10. Reviewing Patron Feedback

Go to **Quality** in the sidebar.

Feedback (thumbs up / thumbs down)

Patrons can rate individual bot responses with a thumbs up or thumbs down. The **Feedback** tab shows:

- The patron's question
- The bot's response
- The rating given
- The date

Use negative feedback to identify responses that need improvement — either by updating the FAQ answer or adjusting the AI personality settings.

Unanswered Queries

The **Unanswered Queries** tab lists patron messages that the bot classified as unclear or off-topic. Review these regularly to find gaps in your FAQ coverage.

Staff Ratings

Go to **Staff Ratings** to see how patrons rated their live chat experience with each librarian. Ratings are on a 1–4 scale:

Rating	Meaning
1	Not Satisfied
2	Moderately Satisfied
3	Satisfied
4	Very Satisfied

11. Exporting and Cleaning Up Data

Exporting sessions to CSV

Go to **Sessions** and click **Export CSV**. You can filter by status or date range before exporting. The CSV file can be opened in Excel or Google Sheets.

The export includes: session ID, timestamps, message count, status, all messages with roles and intents.

Deleting old sessions

Go to **Sessions** → **Cleanup** to delete expired sessions older than a specified number of days. This keeps the database lean and removes old patron data.

Recommendation: Run a cleanup every 30–90 days to remove sessions older than 30 days.

Deleting live chat history

Go to **Live Chat** → **History** and use the **Delete** option to remove completed live chat records older than a specified number of days.

12. Frequently Asked Questions

A patron says the Librarian button is greyed out — why?

The button is automatically disabled 30 minutes before closing time and on closed days. Check that the library hours in **Library Hours** are set correctly.

I didn't receive an email notification when a patron requested a librarian.

Check that your email is listed and active in **Staff Contacts**. Also check your spam folder. If using Gmail, make sure the App Password is still valid.

A patron is waiting but I can't claim the session.

Another librarian may have already claimed it. Refresh the live chat queue page — claimed sessions show the librarian's name. You will also receive an automatic email confirming who claimed it.

How do I change the bot's name from LLORA?

Go to **AI Settings** and update the **Assistant Name** field. The change takes effect immediately.

Can I see who a patron is?

Patrons are identified by a randomly generated display name (e.g. "Blue Owl 42") to protect their privacy. However, when a patron requests a librarian, they are asked to provide their patron type (Student, Faculty, Alumni, Visitor) and additional details — this information is visible in the live chat session.

The bot gave a wrong answer about library hours. How do I fix it?

Go to **Library Info**, find the FAQ item for library hours, and update the answer. Changes take effect immediately.

How do I add a new FAQ button to the widget?

Go to **Library Info** → **Add FAQ**, fill in the label, question, and answer, then click Save. The new button appears in the widget immediately.
